

dyson airblade

Fastest to dry hands hygienically
with HEPA filtered air

Why do we put up with products that don't work properly?

In 1907, paper towels were introduced to washrooms. The electric hand dryer made its first appearance in 1948. But both have changed little since – they can still be expensive and harmful to the environment, and in the case of electric hand dryers, unhygienic. At Dyson, our engineers didn't think that was good enough. So in 2006, they put a century of poor performing hand drying methods to rest – with the invention of Airblade™ technology.

The problems with paper towels

Some paper towels may have a high impact on the environment and cause extra maintenance through mess and blockages. This can make them very expensive. And because dispensers may be found empty leaving no way to dry hands, paper towels can create hygiene issues beyond the washroom.

Did you know?

Ensuring hands are dry is crucial for maintaining hygiene levels, as damp hands can spread up to 1,000 times more bacteria to the surfaces they touch.¹

1. D. R. PATRICK, G. FINDON and T. E. MILLER: Residual moisture determines the level of touch contact associated bacterial transfer following hand washing, *Epidemiol. Infect.* (1997); 119, 319-325.

The single-use paper towel

Most used paper towels aren't recycled and create waste – which often goes into landfill.

Low energy consumption
The Dyson Airblade 9kJ hand dryer is our most energy efficient. The powerful Dyson digital motor dries hands quickly, yet uses just 9.1 kilojoules of energy per dry.²

365,000-use item

Dyson Airblade™ hand dryers are engineered to last. They have also been exposed to real-life environments to ensure that they can withstand the pressures of high usage.

2. Energy consumption determined for Eco mode.

The problems with other hand dryers

Warm air dryers

Warm air dryers are slow. Which means they're energy hungry, expensive to run and unhygienic. Dry times can take more than 20 seconds, so many users give up before their hands are dry – risking increased spread of bacteria.

Jet dryers

Other jet dryers might look like a Dyson Airblade™ hand dryer. But without patented Airblade™ technology and HEPA filters as standard, their performance is not the same. Thanks to weak motors, some other jet dryers can't generate the fast airflow needed to dry hands quickly. They can also lack the power required to draw the air through a HEPA filter. So most other jet dryers aren't just slower than Airblade™ technology, they're less hygienic too.

Inside a drain tank

Some hand dryers collect waste water using drain tanks. But these are unhygienic – providing the perfect breeding ground for bacteria. Drain tanks must be emptied and cleaned regularly – adding time and effort to the washroom maintenance process, and risking spillage of waste water during disposal.

Did you know?
Dyson microbiologists sampled drain tanks and detected high levels of bacteria.³

3. Sources: Dyson internal reports, 2008 and 2015.

Dyson Airblade™ hand dryers work differently

These are the reasons why:

Dyson digital motor V4

HEPA filter

Airblade™ technology

Fast to dry hands hygienically with HEPA filtered air. No other hand dryer has this technology.

HEPA filter
Dyson Airblade™ hand dryers have HEPA filters installed as standard, which capture 99.95% of particles*, including bacteria and viruses. So hands are dried with cleaner air, not dirty air.

Airblade™ technology
Every second, up to 23 litres of air is forced through apertures up to 0.55mm. The result on our latest technology is 624km/h⁴ sheets of air that scrape water from hands, drying them quickly and hygienically.

Dyson digital motor V4
Sometimes conventional motors are slow and can be inefficient. They can also rely on carbon brushes, which wear out over time. The Dyson digital motor V4 is different. It's both compact and powerful, and instead of old-fashioned carbon brushes, it uses digital pulse technology.

4. HEPA filter tested to EN1822-5, by an independent testing laboratory, under prescribed test conditions. 5. Measured in Max mode.

Some hand dryers are too slow

Most other hand dryers are much slower than their manufacturers claim. Many people give up when using a slow hand dryer. But damp hands can spread up to 1,000 times more bacteria than dry hands.¹

20+ sec

No HEPA filter as standard

Dyson hand dryers are fast

Testing based on NSF Protocol P335 shows that Dyson Airblade™ hand dryers are fast. Every second, up to 23litres of air is forced through apertures up to 0.55mm. The result on our latest technology is 624km/h⁵ sheets of air that scrape water from hands, drying them quickly and hygienically.

HEPA filter tested to EN1822-5, by an independent testing laboratory, under prescribed test conditions. 6. Dyson Airblade V hand dryer.

Hygienically drying hands is as important as washing them

Bacteria and viruses deposited by hands onto surfaces can survive for several hours. When others touch these contaminated surfaces, they can be transferred. It's why it's important that hands are dried properly.

Hygienic hand dryers

Dyson Airblade™ hand dryers use HEPA filters. 99.95% of particles⁴, including bacteria and viruses are captured from the washroom air. So hands are dried in 14 seconds or less using cleaner air, not dirty air. The Dyson Airblade V hand dryer contains an antibacterial additive which can help prevent the growth of bacteria.

Certified as hygienic by HACCP International

The Dyson Airblade Wash+Dry hand dryer has been certified for use in food preparation environments.

**Other hand drying methods
can be more expensive to run**
Paper towels need constant restocking
and disposal. Most other hand dryers
are slow. They can be energy-hungry too.

dyson airblade V

Engineered for hygienic performance.
Designed for compact spaces.

HEPA-filtered air

The Dyson Airblade V hand dryer has HEPA filters which capture 99.95% of particles,⁴ including bacteria and viruses from the washroom air, before it's blown onto hands. So hands are dried with cleaner air, not dirty air.

More room. Less hassle.

With a slim, compact profile that protrudes just 10cm from the wall, the Dyson Airblade V hand dryer takes up less space in the washroom. While its easy-mount backplate allows for easy, self-service installation, maintenance and replacement.

Certified by Quiet Mark

The Noise Abatement Society approved the decibel levels and sound quality of the Dyson Airblade Wash+Dry hand dryer – awarding it the Quiet Mark. The Quiet Mark has been developed in response to public health concerns over the psychophysiological effects of excessive or invasive sound produced by appliances.

4. HEPA filter tested to EN1822-5, by an independent testing laboratory, under prescribed test conditions.

dyson airblade 9kJ

The fastest most energy efficient
HEPA-filtered hand dryer⁹

Low energy. Low running costs.

The Dyson Airblade 9kJ hand dryer uses 9.1 kilojoules of energy per dry, meaning it costs just \$19 a year⁷ to run in Eco mode.

No compromises

While other hand dryers might compromise on noise, hygiene, speed or energy efficiency, we don't. The Dyson Airblade 9kJ hand dryer puts into practice everything we feel makes a better hand dryer – its the fastest most energy efficient HEPA-filtered hand dryer⁹.
