Supreme Morning Sky	VM114
Terrazzo Torino	NT981
Terrazzo Venezia	NT150

Based on UV testing for the *exterior wall cladding* range, additional Staron colours have been categorised according to expected performance levels.

Staron offers excellent durability in alfresco applications, requiring minimal maintenance. When needed, the surface can be easily rejuvenated by sanding, with no additional sealing required. Certain designs may require rejuvenation sooner than others depending on exposure.

Rating System:

Staron colour changes are measured in ΔE unit by ASTM D2244 method. Staron colours are categorized following colour change.

ΔE value is based on projected 3 years performance.

- **Group 1:** Good for exterior applications.
- **Group 2:** Will have a slight colour variation
- **Group 3:** Will experience a larger colour variation

PLEASE NOTE: Only designs marked with an * are recommended for full exterior, all-weather, and cladding applications. Other selections are suitable for alfresco and covered exterior environments.
