ORGANOID®
NATURAL SURFACES

Fliess, 28.05.2025

Manufacturer's Declaration

To whom it may concern:

This letter declares the production process of our natural products.

The raw materials that are processed during the production process are air-dried and sieved. The raw material is then mixed with a natural binder and pressed onto a carrier material with pressure and heat (100-120°C). Our products consist of several layers, each layer is pressed with at least 100°C and 200 bar for about one minute, Processing with heat ensures that all germs and bacteria are killed. Another positive effect of the heat treatment is that our products are free of allergens.

Kind regards from Austria,

Teresa Riedmann,

head of sales | authorized representative
